

SquishyMind

A mind map that feels like a hand. Pan, zoom, snap.

A canvas we actually own. Nodes spawn, links pick from the middle of the line, and sync tells the truth about whether the page is saving. Sharing is a token you can rotate, not a hope.

PRODUCT PROBLEM

Iframed editors feel rented. Sharing is an afterthought.

SYNC

Debounced PATCH with honest saving / saved / retry states.

CANVAS

Hand-built pan, zoom, drag, spawn, and undo.

SHARING

Public, unlisted, private. Regenerable tokens.

Solo product and engineering · Live · August 2026

PROBLEM

**Most mind maps are someone else's
iframe wearing your brand.**

The rented editor cannot be keyboarded properly, cannot tell you if the save stuck, and treats a share link as a permanent leak. We wanted a canvas that feels physical under the cursor and a sharing model you can revoke.

Write the canvas. Then make save and share first-class.

A few thousand lines of React replaced the iframe. Tab, Enter, Delete, F, Home, and Escape do what they should. Sync waits 800ms, then says saving, saved, or retry. Viewers get a read-only canvas. Owners can rotate the token.

01

Canvas as the product

Pan, zoom, plus-handle spawn, action chips, detail view, themes, import, export, undo. Flow view puts link pickers on the line, not in a side panel.

02

Honest save states

Debounced PATCH. The indicator distinguishes in-flight, confirmed, and failed. No silent discards.

03

Share without leakage

Visibility is public, unlisted, or private. Tokens rotate. Account deletion actually removes the auth row.

Screens from the shipped work.

Sign up free

We're in beta. Sign up now and lock in Founder pricing — 40% off Premium forever when it launches.

Your brain, but squishier.

A wobbly, slightly sentient mind-mapping canvas you can talk to, build with friends, or click and drag like a normal person. Beta is free. Founders get a permanent discount when paid tiers launch.

Claim Founder Access →

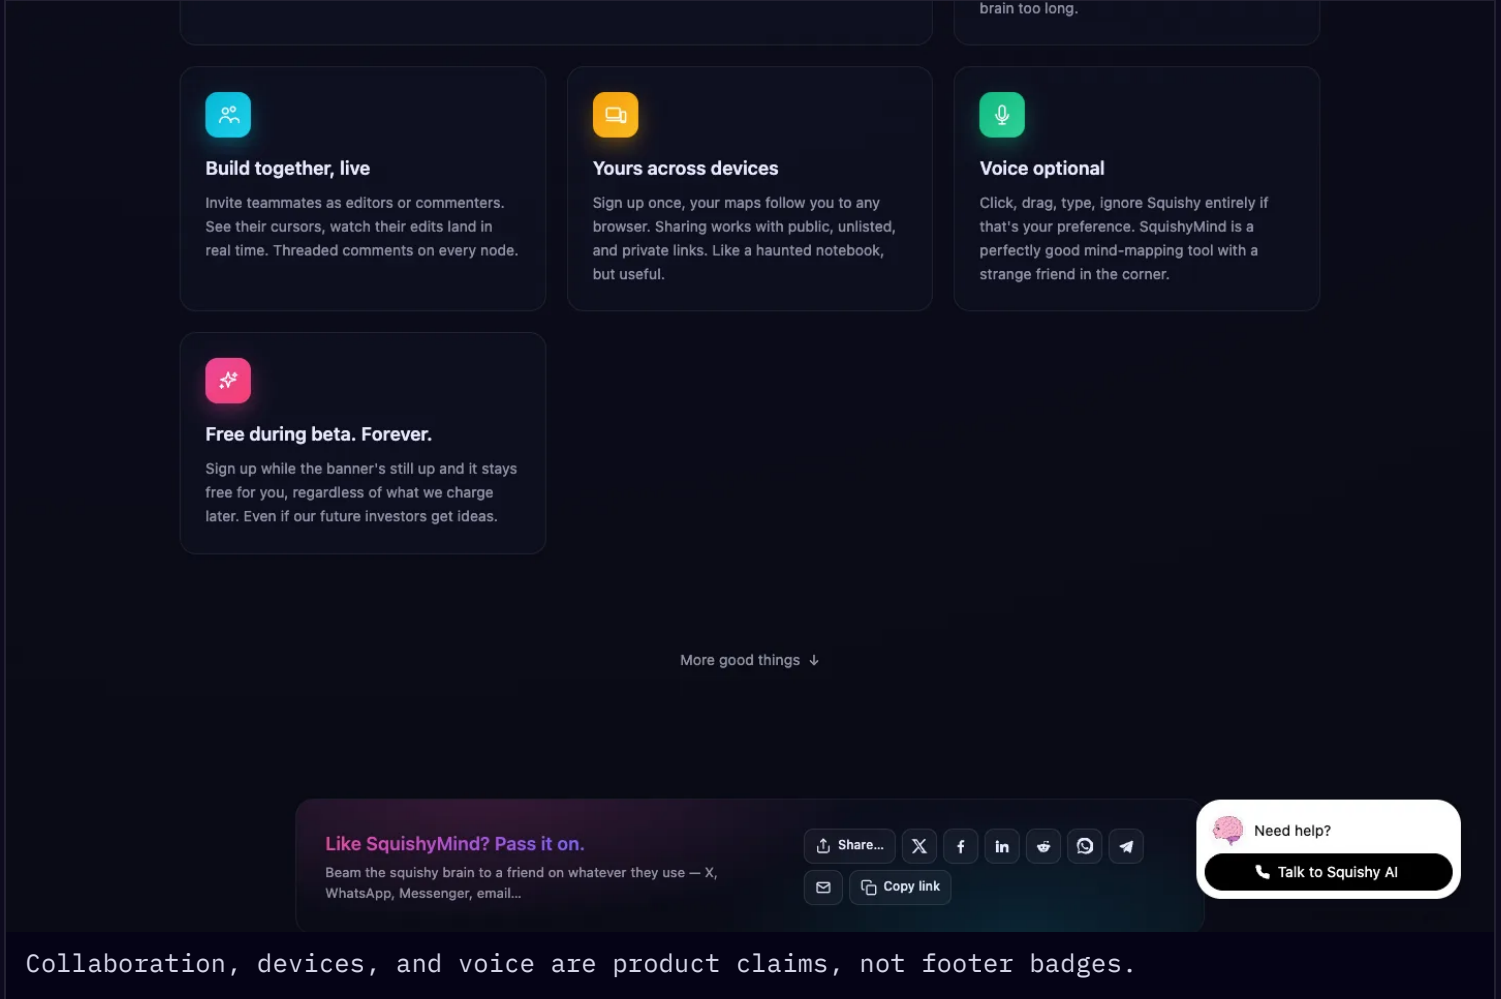

Tell me more

No credit card. No email confirmation. No onboarding flow trying to learn your "goals." 10 seconds, then you're mapping.

 Need help?

Talk to Squishy AI

The marketing surface matches the product: dark, pink, and slightly sentient.

SYSTEM

Next.js for the shell. Supabase for the room.

Auth is handled per page after an Edge middleware fight with `__dirname`. Sessions do not auto-refresh; it holds in practice. RLS policies were simplified after a circular read between mindmaps and collab.

Draw

The canvas component owns interaction. Keyboard shortcuts stay in the same place as the pointer.

Save

Debounce PATCH, visual save state, retry when the network sulks.

Share

Tokenized links, read-only viewers, OG images, and per-page social buttons.

Watch

Sentry on errors. Changelog cadence for the hand-tuned UX wins.

OUTCOME

The iframe is gone

A canvas we can keyboard, theme, and undo without waiting on a vendor.

Sharing you can take back

Rotate the token. Change visibility. Delete the account for real.

Live, with a changelog

Flow view, OG images, Sentry, and founder pricing while beta stays free.

TypeScript

Supabase

Vercel

Sentry

A haunted notebook, but useful.

SquishyMind is the mind map we wanted to keep open all afternoon, then send to one person without sending it to the internet.
